

1 Report 2222 : CT :

3 Ischaemic stroke, deep, recent [select]

4 Ischaemic stroke, deep, old [select]

5 Ischaemic stroke, cortical, recent [select]

6 Ischaemic stroke, cortical, old [select]

7 Ischaemic stroke, underspecified [select]

8 Haemorrhagic stroke, deep, recent [select]

9 Haemorrhagic stroke, deep, old [select]

10 Haemorrhagic stroke, lobar, recent [select]

11 Haemorrhagic stroke, lobar, old [select]

12 Haemorrhagic stroke, underspecified [select]

13 Stroke, underspecified [select]

14 Tumour, meningioma [select]

15 Tumour, metastasis [select]

16 Tumour, glioma [select]

17 Tumour, other [select]

18 Small vessel disease [select]

19 Atrophy [select]

20 Subdural haematoma [select]

21 Subarachnoid haemorrhage, aneurysmal [select]

22 Subarachnoid haemorrhage, other [select]

23 Microbleed, deep [select]

24 Microbleed, lobar [select]

25 Microbleed, underspecified [select]

26 Haemorrhagic transformation [select]

28 CLINICAL HISTORY

31 REPORT

33 CT HEAD PRE AND POST CONTRAST. Comparison is made with the previous CT examination. Pre-contrast study shows focal areas of hyperattenuation

in the anterior left **loc:cortical** frontal lobe, in the left **loc:deep** corona radiata and within the **loc:deep** centrum semi-ovale on the left, **time:recent** new since the previous CT. There are minimal **small vessel disease** white matter changes around the anterior left **loc:cortical** frontal lesion. Small **time:old** chronic left convexity **subdural haematoma** subdural collection. Small quantity of **subarachnoid haemorrhage** subarachnoid blood in left **loc:cortical** frontal sulcus. Moderate **small vessel disease** small vessel disease. No **subdural haematoma** extra-axial collections. Normal ventricles and basal cisterns. Skull vault normal. Contrast images show no evidence of abnormal enhancement. Multiple foci of **time:recent** acute **haemorrhagic stroke** **haemorrhage** in the left frontal lobe, trace of **subarachnoid haemorrhage** subarachnoid blood and shallow left **subdural haematoma** subdural haemorrhage. No evidence of cerebral **tumour metastasis** metastases.
